

HOW IT WORKS

An Atmospheric Water Generator is a humidity and temperature driven machine. In short, it uses humidity to generate water. The harvesting process is done by pulling fresh air through the unit air filter. This process captures the air's natural moisture and condenses into droplets. The water is then pumped into a collection tray and purified through UV sterilization. When enough water is collected it is pumped through the custom five stage filtration system then purified by UV when stored. Always fresh and ready to drink!

PURIFICATION

All machines use a multi-stage filtration system that includes UV purification – any stored water is continuously filtered to eliminate bacteria and contaminants.

MULTI-APPLICATIONS

- Home
- Office
- RVs
- Boats / Yachts
- Special Events
- Sporting Complex
- Plus, much more...

NU WATER 60 ADVANTAGES

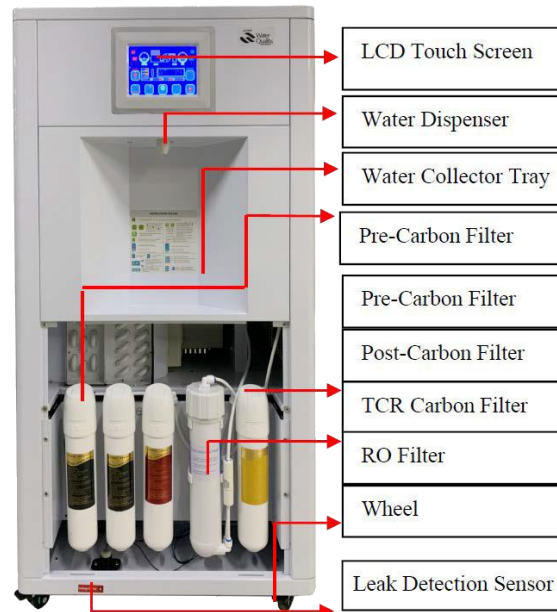

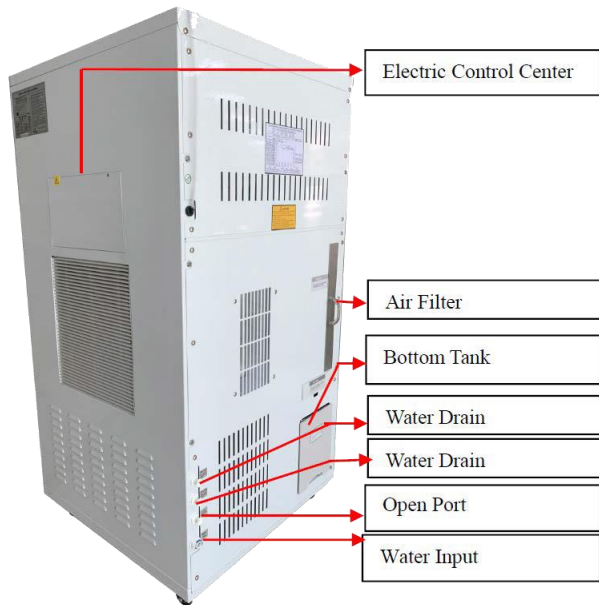

- Access on or off grid
- Optional energy sources such as solar and diesel generator
- Generates fresh drinking water cost effectively
- Minimizes environmental impact by eliminating the need to transport and store water
- Eliminates the risk of water contamination
- Reduces carbon footprint
- Provides dehumidification, air and water purification
- Transfers easily as units are portable
- EPA 99.9% contaminate free
- No plumbing or piping
- Hot / Cold water function
- Simple operation

EXTERNAL CONNECTIONS

When the humidity is dry or the weather is cold, water production capacity will be reduced, you can make use of the external water connection on the unit. External connection still utilizes the multistage filtration and reverse osmosis system, the ultraviolet light sterilization and water re-circulation technology.

The unit delivers water that is colorless, odorless and transparent. No residual chlorine, trihalomethanes, pesticide residue or chemical organic matter.

ABOUT THE NU WATER 60

The **Nu Water 60** is specifically designed for home and office use. Using 110V power, it provides both cold and hot water (39°F - 203°F) up to 16 gallons PER DAY based on humidity and temperatures.

The working temp of the unit is 59°F - 104°F and 35% - 95% humidity, to produce 16 gallons daily. 86°F @ 80% humidity is recommended.

The unit will still produce water daily without being at recommended temps, the production output will just be reduced. The unit will store 12 gallons of water.

The **Nu Water 60** contains no heavy metals like rust, lead and mercury. Water purification accuracy is 0.0001 micron ensuring pure quality water.
